The purchase of Hysol EA934 from 1969-1971 from any distributor. 3. The use of Hysol EA934 in the U.S. Navy from 1969-1971. 4. The purchase of Hysol EA934 by the General Services Administration from 1969-1971.
GSA-2015-000804	Request	Morton Salt	06/24/2015	Records not reasonably described	Records pertaining to the salt bid tabulation. Bid for salt: 47T100. Opening Date: March 11, 2015
GSA-2015-000803	Request	(Self)	07/02/2015	Full grant	Records pertaining to the records maintained by GSA for employees from all offices in the state of Georgia: The contents of the list should be the following items: Employee names (Please separate first and last names), work Telephone numbers, Location Address, Agency Position, Income and Employee Email Address.
GSA-2015-000806	Appeal	(Self)	07/14/2015	Partially affirmed & partially reversed/remanded	Appealing the Final Disposition handed down in FOIA request GSA-2015-000194. Specifically, regarding the Executive Summary of the 2004 GSA Seismic Hazard Evaluation and the Executive Summary of the 2005 GSA Building Engineering Report for the Hawthorne Federal Building at 15000 Aviation Boulevard, Lawndale, CA. pursuant to 5 U.S.C. § 552(b)(5) and (b)(7)(f).

manageable through established ESF instruments. SEA/SH risk is assessed as Moderate. While the Project involves no civil works, labor influx, worker camps, or direct service delivery, its PDO and Monitoring and Evaluation arrangements are clearly linked to fertilizer access for farmers including marginal farmers, sharecroppers, and female-headed households, creating interfaces across BCIC/BADC, suppliers, transporters, dealers, and farming communities. The SEA/SH rating reflects dealer-and farmer-facing distribution risks within Bangladesh's broader GBV context and will be reviewed during implementation based on supervision findings or complaints.

59. **Five Environmental and Social Standards (ESS) are relevant for this Project.** ESS1, ESS2, ESS3, ESS4, and ESS10 are relevant given the project's environmental and social risks, including fertilizer handling, worker safety, community exposure, pollution prevention, and stakeholder engagement requirements, while ESS5–ESS9 are not applicable as the project involves no land acquisition, biodiversity impacts, cultural heritage risks, Indigenous Peoples impacts, or financial intermediaries. The PCMU under the Finance Division, supported by experienced Environmental and Social (E&S) staff already deputized, will oversee implementation of ESF requirements, monitoring and reporting, and coordination with the World Bank. BADC has prior ESF implementation experience and dedicated E&S capacity, while BCIC has operational experience in fertilizer handling and distribution. Institutional arrangements, capacity building, and implementation responsibilities have been further detailed in the Environmental and Social Commitment Plan (ESCP).

60. **Key Environment and Social instruments include** a Stakeholder Engagement Plan prepared and disclosed to guide inclusive communication and strengthen existing grievance redress mechanism at MOF, BADC, and BCIC to address project-related grievances, including SEA/SH complaints through confidential and survivor-centered procedures. The SEP and ESCP were disclosed in-country on June 10, 2026.⁸ Labor Management Procedures will define labor conditions, occupational health and safety requirements, Codes of Conduct, and worker grievance mechanisms with provisions for handling SEA/SH complaints. Due to the emergency nature and short implementation timeline, the Environmental and Social Management Plan (ESMP) will be prepared immediately after effectiveness and prior to implementation commencement to establish supply chain mapping and operationalize mitigation measures for fertilizer transport, storage, handling, waste management, occupational health and safety, emergency preparedness, and community safety risks. The ESCP consolidated all commitments, including institutional arrangements, timelines, capacity-building measures, and monitoring requirements to ensure effective management of environmental and social risks throughout implementation in line with the ESF.

Citizen Engagement

61. **The Project will utilize the existing Citizen Engagement mechanisms under the PCMU** and build on its project-specific stakeholder engagement and consultations activities as well as the Grievance Redress Mechanism (GRM). Regular consultations will be held to ensure stakeholder engagement and feedback. Given the fast implementation of the Project, early activation of an effective GRM is considered important to ensure timely, transparent, and credible handling of concerns and feedback. The GRM will be designed to respond to issues and concerns related to BCIC and BADC. Consultations outcomes and GRM data will be analyzed regularly to understand the key concerns of stakeholders and the learnings will be used for necessary course correction. The indicator will be formulated as "Grievances addressed within stipulated timelines" for Citizen Engagement.

Grievance Redress Services

62. **Grievance Redress.** Communities and individuals who believe that they are adversely affected by a project supported by the World Bank may submit complaints to existing project-level grievance mechanisms or the Bank's Grievance Redress Service (GRS). The GRS ensures that complaints received are promptly reviewed in order to address project-related concerns. Project affected communities and individuals may submit their complaint to the Bank's

⁸ <https://badc.gov.bd/pages/notices/bcic-and-badc-to-disclose-the-escp-and-sep-and-share-the-disclosure-links-we-can-use-that-link-for-reference-today-is-final-day-please-s4oryl-6a2a399f323d7c14179babdc> ; <https://bcic.gov.bd/pages/notices/>

independent Accountability Mechanism (AM). The AM houses the Inspection Panel, which determines whether harm occurred, or could occur, as a result of Bank non-compliance with its policies and procedures, and the Dispute Resolution Service, which provides communities and borrowers with the opportunity to address complaints through dispute resolution. Complaints may be submitted to the AM at any time after concerns have been brought directly to the attention of Bank Management and after Management has been given an opportunity to respond. For information on how to submit complaints to the Bank's GRS, visit <http://www.worldbank.org/GRS>. For information on how to submit complaints to the Bank's Accountability Mechanism, visit <https://accountability.worldbank.org>.

V. KEY RISKS

63. **The overall risk to achieving the PDO is assessed as Substantial.** This rating reflects the emergency nature of the operation, the time-bound need to maintain fertilizer availability during the Aman and Boro planting seasons, and the fiduciary and coordination risks associated with high-value commodity imports under crisis conditions. The main risks are macroeconomic, sector policy, institutional capacity, and fiduciary risks, as summarized below.

64. **Macroeconomic risk is High.** Bangladesh remains exposed to external shocks that could impair the timely import of fertilizer, including higher international prices, tighter foreign exchange conditions, and reduced trade finance availability. A prolonged Conflict in the Middle East could further disrupt supply chains and increase import costs for fertilizer and related inputs. Fiscal pressures, including weaker revenue performance and elevated subsidy demands, could also constrain the Government's capacity to maintain adequate stocks. The Project partially mitigates this risk by providing time-bound emergency financing for fertilizer imports needed during the next two planting seasons.

65. **Sector strategies and policies risk is High.** The Project relies on Bangladesh's existing fertilizer management system for procurement, storage, and distribution. Known weaknesses in overall coordination, demand estimation, procurement timing, logistics, and last-mile monitoring could affect the timely delivery of fertilizer during the relevant planting windows. Sector risks stem from Bangladesh's heavy reliance on fertilizer imports and weaknesses in demand estimation, procurement timing, logistics, and last-mile monitoring, which could delay delivery during critical planting windows. In addition, the broader subsidy regime carries efficiency and policy risks. The risks will be mitigated through strengthened coordination among MOA, BCIC, BADC, and DAE through dedicated focal points; regular monitoring of procurement, stock, and distribution status; use of DAE control room data and existing fertilizer monitoring committees; strengthened reporting to track fertilizer availability across districts; and continued World Bank implementation support and policy dialogue on demand forecasting, dealer oversight, and digital tracking of fertilizer movement.

66. **Institutional Capacity for Implementation and Sustainability risk is Substantial.** The operation requires close coordination among the Finance Division, BCIC, BADC, and other agencies during a compressed implementation period. Delays in decision-making, documentation, or inter-agency coordination could affect procurement, disbursement, and reporting. This risk is mitigated by using the existing PCMU established for the RRO-CERP, relying on agencies that already manage fertilizer imports and distribution, and clarifying roles through the Project Implementation Plan and implementation agreements. We will also explore the possibility of conducting ex-post validation of delivery of fertilizers to smallholder farmers on a sampling basis.

67. **Fiduciary risk is Substantial.** Key financial management and procurement risks arise from the emergency nature of the operation, the involvement of multiple implementing entities, reliance on government-to-government (G2G) fertilizer supply arrangements and direct selection methods, high-value strategic commodity procurement, international price volatility, limited supplier availability, intermediary and supply-chain transparency risks, and the need for rapid budget allocation, authorization, documentation, and reporting. These risks could delay reimbursements, weaken controls over eligible expenditures, or affect the efficiency and effectiveness of procurement and contract management processes if not managed closely. Mitigation measures include centralized oversight by the PCMU, use of existing government

financial systems, quarterly IUFRs, annual audits, review of existing G2G arrangements and any extensions thereto, industry expert review of contractual arrangements and pricing methodologies, supplier execution of the World Bank's ACG Letter of Acceptance as a condition for financing eligibility, maintenance of complete procurement and contract documentation, enhanced verification of fertilizer shipments and deliveries, supply-chain due diligence measures, and intensified implementation support and oversight by the World Bank. Specifically, regarding G2G supply arrangements, contractual risks are mitigated through the application of the World Bank's ACG, supplier execution of the Letter of Acceptance on ACG (see paragraph 42), enhanced supply-chain verification and due diligence measures, independent inspection and certification arrangements, and Bank review of any extensions to the existing agreements.

PVC Pipe	61,449	51,393	48,843
Corporate Office (includes deferred tax and pension assets)	<u>42,597</u>	<u>48,942</u>	<u>29,578</u>
	<u>\$320,293</u>	<u>\$183,319</u>	<u>\$160,667</u>

Substantially all sales are made within North America. Net sales to a single customer within the Carlton and PVC Pipe segments totaled approximately 17% in 2000 and 1999 and 15% in 1998 of consolidated net sales.

NOTE L—RESTRUCTURING CHARGE

During the fourth quarter of 1998 the Company recorded a restructuring charge of \$792,000 when it entered into a commitment to have a new distribution center constructed in South Carolina in order to consolidate distribution activities. The charge, which is included in cost of products sold, consisted primarily of a write-down of certain inventory to net realizable value.

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS—Continued
 THE LAMSON & SESSIONS CO. AND SUBSIDIARIES
 NOTE M—SUMMARY OF QUARTERLY RESULTS OF OPERATIONS—(UNAUDITED)

(Dollars in thousands, except per share data)

	Net Sales	Gross Profit	Net Income	Basic Earnings Per Common Share	Diluted Earnings Per Common Share	Market Price Per Share	
						High	Low
Fiscal 2000:							
First quarter	\$ 80,355	\$21,320	\$ 4,698	\$ 0.35	\$ 0.35	\$ 8.25	\$ 4.75
Second quarter	91,284	26,908	7,131	0.53	0.52	15.31	7.25
Third quarter	88,291	22,867	6,976	0.51	0.48	24.88	11.75

Fourth quarter	74,265	15,691	10,510(1)	0.78	0.78	5.25	4.44
Total	\$291,381	\$61,400	\$18,788	\$1.40*	\$ 1.39		

- *

Earnings per share were computed on a stand-alone quarterly basis for each respective quarter. Therefore, the sum of the quarters in 1999 for Basic Earnings Per Common Share and in 2000 for Diluted Earnings Per Common Share do not equal the years’ total due to rounding.
- (1)

Includes an income tax benefit of \$6,900 in the fourth quarter of 1999 compared with \$700 in each of the previous three quarters of 1999. See Note J.

REPORT OF INDEPENDENT AUDITORS

Board of Directors and Shareholders
The Lamson & Sessions Co.

We have audited the accompanying consolidated balance sheets of The Lamson & Sessions Co. and Subsidiaries as of December 30, 2000 and January 1, 2000, and the related consolidated statements of income, shareholders' equity and cash flows for each of the three fiscal years in the period ended December 30, 2000. Our audits also included the financial statement schedule listed in the Index at Item 14 (a). These financial statements and schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements and schedule based on our audits.

We conducted our audits in accordance with auditing standards generally accepted in the United States. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the consolidated financial position of The Lamson & Sessions Co. and Subsidiaries at December 30, 2000 and January 1, 2000, and the consolidated results of their operations and their cash flows for each of the three fiscal years in the period ended December 30, 2000, in conformity with accounting principles generally accepted in the United States. Also, in our opinion, the related financial statement schedule, when considered in relation to the basic financial statements taken as a whole, presents fairly in all material respects the information set forth therein.

Ernst & Young LLP

Cleveland, Ohio
January 30, 2001

STATEMENT OF MANAGEMENT’S RESPONSIBILITY

We have prepared the financial statements and other financial information contained in this Annual Report.

The management of Lamson & Sessions is primarily responsible for the integrity of this financial information. The financial statements were prepared in accordance with accounting principles generally accepted in the United States and necessarily include certain amounts based on management’s reasonable best estimates and judgments, giving due consideration to materiality. Financial information contained elsewhere in this Annual Report is consistent with that contained in the financial statements.

Management is responsible for establishing and maintaining a system of internal control designed to provide reasonable assurance as to the integrity and reliability of financial reporting. The concept of reasonable assurance is based on the recognition that there are inherent limitations in all systems of internal control, and that the cost of such systems should not exceed the benefits to be derived therefrom.

To meet management’s responsibility for financial reporting, we have established internal control systems that we believe are adequate to provide reasonable assurance that our assets are protected from loss. These systems produce data used for the preparation of published financial information and provide for appropriate reporting relationships and division of responsibility. All significant systems and controls are reviewed periodically by management in order to ensure compliance and by our independent auditors to support their audit work. It is management’s policy to implement a high proportion of recommendations resulting from this review.

The Audit Committee of the Board of Directors, composed solely of outside directors, meets regularly with management, the internal audit group and our independent auditors to review accounting, auditing and financial matters. Both the independent audit and the internal auditor group have free access to the Audit Committee, with or without management, to discuss the scope and results of their audits and the adequacy of the system of internal controls.

PART II

Item 9. — Disagreements on Accounting and Financial Disclosure

None

PART III

Item 10. — Directors and Executive Officers of the Registrant

(a) Directors

The information set forth under the caption “Election of Directors” in the Company’s definitive proxy statement for its Annual Meeting of Shareholders to be held April 27, 2001 is hereby incorporated by reference.

(b) Executive Officers — See Part I

(c) Compliance with Section 16 (a) of the Exchange Act.

The information set forth under the caption “Section 16(a) Beneficial Ownership Reporting Compliance” in the Company’s definitive proxy statement for its Annual Meeting of Shareholders to be held April 27, 2001 is hereby incorporated by reference.

Item 11. — Executive Compensation

The information set forth under the caption “Executive Compensation” in the Company’s definitive proxy statement for its Annual Meeting of Shareholders to be held April 27, 2001 is hereby incorporated by reference.

Item 12. — Security Ownership of Certain Beneficial Owners and Management

The information set forth under the captions “Ownership of the Company’s Common Shares,” “Election of Directors” and “Security Ownership of Management” in the Company’s definitive Proxy Statement for its Annual Meeting of Shareholders to be held April 27, 2001 is hereby incorporated by reference.

Item 13. — Certain Relationships and Related Transactions

During the past fiscal year, the Company, in the normal course of business, utilized the services of the law firm of Jones, Day, Reavis & Pogue, in which Mr. Coquillette, a director of the Company, is a partner. The Company plans to continue using the services of the firm in 2001.

PART IV

Item 14. — Exhibits, Financial Statement Schedules, and Reports on Form 8-K

- (a) The following documents are filed as part of this report:

Consolidated financial statements of The Lamson & Sessions Co. and Subsidiaries are included in Item 8 of this report:

1. Financial Statements

Consolidated Statements of Income for Fiscal Years Ended 2000, 1999 and 1998.

Consolidated Statements of Cash Flows for Fiscal Years Ended 2000, 1999 and 1998.

Consolidated Balance Sheets at December 30, 2000 and January 1, 2000.

Consolidated Statements of Shareholders' Equity for Fiscal Years Ended 2000, 1999 and 1998.

Notes to Consolidated Financial Statements.

2. Financial Statement Schedule

Schedule II — Valuation and Qualifying Accounts and Reserves.

All other schedules for which provision is made in the applicable accounting regulations of the Securities and Exchange Commission are not required under the related instructions or are inapplicable and, therefore, have been omitted.

3. The exhibits listed in the accompanying Exhibit Index and required by Item 601 of Regulation S-K (numbered in accordance with Item 601 of Regulation S-K) are filed or incorporated by reference as part of this Report.

- (b) Reports on Form 8-K

1. Form 8-K filed on October 6, 2000.

2. Form 8-K/A filed on December 5, 2000.

- (c) Exhibits — See 14(a) 3.

SCHEDULE II — Valuation and Qualifying Accounts and Reserves

(Dollars in thousands)

Description	Balance at Beginning of Period	Charged to Costs and Expenses	Deductions and Other		Balance at End of Period
Year Ended December 30, 2000					
Allowances deducted from assets:					
Trade receivable allowances	\$2,078	\$ 817	\$ 501	(A)	\$2,394
Inventory obsolescence reserve	1,030	1,396	1,387	(B)	1,039

NOTE 11: FHLB ADVANCES (Dollars in Thousands)

Arrow has established overnight and 30 day term lines of credit with the FHLB each in the amount of \$118,312. If advanced, such lines of credit will be collateralized by mortgage-backed securities, loans and FHLB stock. Participation in the FHLB program requires an investment in FHLB stock. The investment in FHLB stock, included in Securities Available-for-Sale on the Consolidated Balance Sheets, amounted to \$8,499 and \$7,613 at December 31, 2005 and 2004, respectively. Arrow also borrows longer-term funds from the FHLB. Certain borrowings are in the form of "convertible advances." These advances have a set final maturity, but are callable by the FHLB at certain dates beginning no earlier than one year from the issuance date. If the advances are called, Arrow may elect to have the funds replaced by the FHLB at the then prevailing market rate of interest. The borrowings are secured by mortgage loans and/or mortgage-backed securities and/or FHLB stock held by Arrow. The total amount of assets pledged to the FHLB for borrowing arrangements at December 31, 2005 and 2004 amounted to \$220,441 and \$226,503, respectively. The table below presents information applicable to FHLB advances as of December 31, 2005 and 2004:

<u>2005 Amount</u>	<u>2004 Amount</u>	<u>Effective Rate</u>	<u>First Call Date</u>	<u>Call Frequency</u>	<u>Maturity Date</u>
\$ 2,000	\$ ---	4.30%		Overnight	January 2, 2006
5,000	5,000	5.43%	March 11, 2001	Quarterly	March 11, 2008
10,000	10,000	4.73%			March 1, 2006
10,000	10,000	5.12%			February 14, 2011
10,000	10,000	5.18%			February 23, 2011

10,000	---	3.88%	October 6, 2007	Quarterly	October 6, 2015
10,000	---	4.41%	December 19, 2007	Quarterly	December 19, 2010
10,000	---	4.32%	October 6, 2008	One Time	October 9, 2012
---	10,000	4.01%	June 3, 2005	One Time	June 4, 2012
---	5,000	5.85%	February 22, 2001	Quarterly	November 22, 2005
---	5,000	5.90%	May 22, 2001	Quarterly	November 22, 2005
---	20,000	5.93%	November 2, 2001	Quarterly	November 2, 2005
---	5,000	5.98%	November 22, 2001	Quarterly	November 22, 2005
---	10,000	3.02%	August 22, 2005	One Time	August 7, 2007
---	10,000	1.91%			April 28, 2005
---	10,000	2.26%			November 17, 2005
---	10,000	2.55%			January 31, 2005
---	10,000	2.58%			February 15, 2005
<u>\$157,000</u>	<u>\$150,000</u>				

The estimated fair value of FHLB advances was \$156,851 and \$152,675 at December 31, 2005 and 2004, respectively. The fair value of FHLB advances is estimated based on the discounted value of contractual cash flows. The discount rate is estimated using current rates on FHLB advances with similar maturities and call features. The table below presents the amounts of FHLB advances maturing in the next five years and beyond:

<u>Final Maturity</u>	<u>Amount</u>
2006	\$ 32,000
2007	20,000
2008	5,000
2009	---
2010	40,000
Beyond	60,000
Total FHLB Advances	<u>\$157,000</u>

NOTE 12: GUARANTEED PREFERRED BENEFICIAL INTERESTS IN CORPORATION'S JUNIOR SUBORDINATED DEBENTURES (In Thousands)

During 2005, there were outstanding two classes of financial instruments issued by two separate subsidiary business trusts of Arrow, having an aggregate amount of \$20,000.

The first of the two classes of trust-issued instruments outstanding at year-end was issued by Arrow Capital Statutory Trust II ("ACST II"), a Delaware business trust established on July 16, 2003, upon the filing of a certificate of trust with the Delaware Secretary of State. In July 2003, ACST II issued all of its voting (common) stock to Arrow and issued and sold to an unaffiliated purchaser 30-year guaranteed preferred beneficial interests in the trust's assets ("ACST II trust preferred securities") in the aggregate amount of \$10,000. The ACST II trust preferred securities bear a rate of 6.53% until September 30, 2008. After that date, the rate will become a variable rate adjusted quarterly to the 3-month LIBOR plus 3.15%. ACST II used the proceeds of the sale of its trust preferred securities to purchase an identical amount (\$10,000) of junior subordinated debentures issued by Arrow that bear an interest rate identical at all times to the rate payable on the ACST II trust preferred securities.

The second of the two classes of trust-issued instruments outstanding at year-end was issued by Arrow Capital Statutory Trust III ("ACST III"), a Delaware business trust established on December 23, 2004, upon the filing of a certificate of trust with the Delaware Secretary of State. On December 28, 2004, the ACST III issued all of its voting (common) stock to Arrow and issued and sold to an unaffiliated purchaser 30-year guaranteed preferred beneficial interests in the trust's assets ("ACST III trust preferred securities") in the aggregate amount of \$10,000. The rate on the ACST III trust preferred securities is a variable rate, adjusted quarterly, equal to the 3-month LIBOR plus 2.00%. ACST III used the proceeds of the sale of its trust preferred securities to purchase an identical amount (\$10,000) of junior subordinated debentures issued by Arrow that bear an interest rate identical at all times to the rate payable on the ACST III trust preferred securities.

On December 31, 2004, a third outstanding class of instruments previously issued by a subsidiary trust of Arrow was redeemed by that trust at a redemption price equal to the aggregate liquidation amount of the instruments, or \$5,000. The trust, Arrow Capital Trust I ("ACT I"), was established as a Delaware business trust in November 1999. In December 1999, ACT I issued and sold to several unaffiliated purchasers 30-year guaranteed preferred beneficial interests in the trust's assets ("ACT I trust preferred securities") in the aggregate amount of \$5,000 at a fixed rate of 9.50%. ACT I used the proceeds from the sale of the ACT I trust preferred securities to acquire an identical amount (\$5,000) of junior subordinated debentures issued by Arrow bearing an identical interest rate (9.50%). On December 31, 2004, at the same time that ACT I redeemed all outstanding ACT I trust preferred securities, Arrow redeemed all \$5,000 in aggregate principal amount of its junior subordinated debentures held by ACT I.

The primary assets of the two subsidiary trusts having trust preferred securities outstanding at year-end, ACST II and ACST III (the "Trusts"), are Arrow's junior subordinated debentures discussed above, and the sole revenues of the Trusts are payments received by them from Arrow with respect to the junior subordinated debentures. The trust preferred securities issued by the Trusts are non-voting. All common voting securities of the Trusts are owned by Arrow. Arrow used the net proceeds from its sale of junior subordinated debentures to the Trusts, facilitated by the Trust's sale of their trust preferred securities to the purchasers thereof, for general corporate purposes. The trust preferred securities and underlying junior subordinated debentures, with associated expense that is tax deductible, qualify as Tier I capital under regulatory definitions.

Arrow's primary source of funds to pay interest on the debentures held by the Trusts are current dividends received by Arrow from its subsidiary banks. Accordingly, Arrow's ability to make payments on the debentures, and the ability of the Trusts to make payments on their trust preferred securities, are dependent upon the continuing ability of Arrow's subsidiary banks to pay dividends to Arrow. Since the trust preferred securities issued by the subsidiary trusts and the underlying junior subordinated debentures issued by Arrow at December 31, 2005, 2004 and 2003 are classified as debt for financial statement purposes, the expense associated with these securities is recorded as interest expense in the consolidated statements of income for the three years.

The estimated fair value of the outstanding trust preferred securities and underlying junior subordinated debentures was \$20,007 and \$20,651 at December 31, 2005 and 2004, respectively. The fair value of these securities was estimated based on the discounted value of contractual cash flows. The discount rate utilized in the estimate was the published yield on seasoned BAA corporate debt securities on the date of valuation.

NOTE 13: ACCUMULATED OTHER COMPREHENSIVE (LOSS) INCOME (In Thousands)

The following table presents the components, net of tax, of accumulated other comprehensive (loss) income as of December 31:

	<u>2005</u>	<u>2004</u>
Excess of Additional Pension Liability Over Unrecognized Prior Service Cost	\$ (796)	\$(351)
Net Unrealized Securities Holding (Losses) Gains	<u>(3,767)</u>	<u>780</u>
Total Accumulated Other Comprehensive (Loss) Income	<u><u>\$ (4,563)</u></u>	<u><u>\$ 429</u></u>

NOTE 14: EARNINGS PER COMMON SHARE (In Thousands, Except Per Share Amounts)

The following table presents a reconciliation of the numerator and denominator used in the calculation of basic and diluted earnings per common share ("EPS") for each of the years in the three-year period ended December 31, 2005. All share and per share amounts have been adjusted for the 2005 3% stock dividend.

	<u>Net Income (Numerator)</u>	<u>Weighted-Average Shares (Denominator)</u>	<u>Per Share Amount</u>
For the Year Ended December 31, 2005:			
Basic EPS	\$18,639	10,420	<u>\$1.79</u>
Dilutive Effect of Stock Options	---	176	
Diluted EPS	<u>\$18,639</u>	<u>10,596</u>	<u>\$1.76</u>
For the Year Ended December 31, 2004:			
Basic EPS	\$19,478	10,426	<u>\$1.87</u>
Dilutive Effect of Stock Options	---	249	
Diluted EPS	<u>\$19,478</u>	<u>10,675</u>	<u>\$1.82</u>
For the Year Ended December 31, 2003:			
Basic EPS	\$18,917	10,452	<u>\$1.81</u>
Dilutive Effect of Stock Options	---	241	
Diluted EPS	<u>\$18,917</u>	<u>10,693</u>	<u>\$1.77</u>

During a portion of 2005, options to purchase 66 shares of common stock at an average price of \$31.09 per share were outstanding but were not included in the computation of diluted EPS because the options' exercise price was greater than the average market price of the common shares during that period. Antidilutive shares for 2004 and 2003 were 66 at an average price of \$31.09 per share and 143 at an average price of \$25.88, for the respective years.

NOTE 15: REGULATORY MATTERS (Dollars in Thousands)

In the normal course of business, Arrow and its subsidiaries operate under certain regulatory restrictions, such as the extent and structure of covered intercompany borrowings and maintenance of reserve requirement balances.

The principal source of the funds for the payment of shareholder dividends by Arrow has been from dividends declared and paid to Arrow by its bank subsidiaries. As of December 31, 2005, the maximum amount that could have been paid by subsidiary banks to Arrow, without prior regulatory approval, was approximately \$35,820.

Under current Federal Reserve regulations, Arrow is prohibited from borrowing from the subsidiary banks unless such borrowings are secured by specific obligations. Additionally, the maximum of any such borrowing is limited to 10% of an affiliate's capital and surplus.

Arrow and its subsidiary banks are subject to various regulatory capital requirements administered by the federal banking agencies. Failure to meet minimum capital requirements can initiate certain mandatory--and possibly additional discretionary--actions by regulators that, if undertaken, could have a direct material effect on an institution's financial statements. Under capital adequacy guidelines and the regulatory framework for prompt corrective action, Arrow and its subsidiary banks must meet specific capital guidelines that involve quantitative measures of assets, liabilities, and certain off-balance sheet items as calculated under regulatory accounting practices. Capital amounts and classification are also subject to qualitative judgments by the regulators about components, risk weightings, and other factors.

Quantitative measures established by regulation to ensure capital adequacy require Arrow and its subsidiary banks to maintain minimum capital amounts and ratios (set forth in the table below) of total and Tier I capital (as defined in the regulations) to risk-weighted assets (as defined), and of Tier I capital (as defined) to average assets (as defined). Management believes, as of December 31, 2005 and 2004, that Arrow and both subsidiary banks meet all capital adequacy requirements to which they are subject.

NOTE 15: REGULATORY MATTERS (Continued)

As of December 31, 2005, Arrow and both subsidiary banks qualified as well capitalized under the regulatory framework for prompt corrective action. To be categorized as "Well Capitalized," Arrow and its subsidiary banks must maintain minimum total risk-based, Tier I risk-based, and Tier I leverage ratios as set forth in the table below. There are no conditions or events that management believes have changed Arrow's or its subsidiary banks' categories.

Arrow's and its subsidiary banks', Glens Falls National Bank and Trust Company ("Glens Falls National") and Saratoga National Bank and Trust Company ("Saratoga National"), actual capital amounts and ratios are presented in the table below as of December 31, 2005 and 2004:

	<u>Actual</u>		<u>Minimum Amounts For Capital Adequacy Purposes</u>		<u>Minimum Amounts To Be Well Capitalized</u>	
	<u>Amount</u>	<u>Ratio</u>	<u>Amount</u>	<u>Ratio</u>	<u>Amount</u>	<u>Ratio</u>
As of December 31, 2005:						
Total Capital						
(to Risk Weighted Assets):						
Arrow	\$138,043	13.8%	\$80,083	8.0%	\$100,104	10.0%
Glens Falls National	119,707	14.3%	66,782	8.0%	83,478	10.0%
Saratoga National	20,381	12.2%	13,365	8.0%	16,706	10.0%
Tier I Capital						
(to Risk Weighted Assets):						
Arrow	125,799	12.6%	40,063	4.0%	60,095	6.0%
Glens Falls National	109,526	13.1%	33,392	4.0%	50,088	6.0%
Saratoga National	17,121	10.3%	6,681	4.0%	10,022	6.0%
Tier I Capital						
(to Average Assets):						
Arrow	125,799	8.4%	60,263	4.0%	60,263	4.0%

NOTE 16: RETIREMENT PLANS (Dollars in Thousands)

Arrow sponsors qualified and nonqualified defined benefit pension plans and other postretirement benefit plans for its employees. Arrow maintains a non-contributory pension plan, which covers substantially all employees. Effective December 1, 2002, all active participants in the qualified defined benefit pension plan were given a one-time irrevocable election to continue participating in the traditional plan design, for which benefits were based on years of service and the participant's final compensation (as defined), or to begin participating in the new cash balance plan design. All employees who participate in the plan after December 1, 2002 automatically participate in the cash balance plan design. The interest credits under the cash balance plan are based on the 30-year U.S. Treasury rate. The service credits under the cash balance plan are equal to 6.0% for employees who become participants on or after January 1, 2003. For employees in the plan prior to January 1, 2003, the service credits are scaled based on the age of the participant, and range from 6.0% to 12.0%. The funding policy is to contribute up to the maximum amount that can be deducted for federal income tax purposes and to make all payments required under ERISA. Arrow also maintains a supplemental non-qualified unfunded retirement plan to provide eligible employees of Arrow and its subsidiaries with benefits in excess of qualified plan limits imposed by federal tax law.

Arrow has multiple non-pension postretirement benefit plans. The health care, dental and life insurance plans are contributory, with participants' contributions adjusted annually. Arrow's policy is to fund the cost of postretirement benefits based on the current cost of the underlying policies. However, the health care plan provision for automatic increases of Company contributions each year is based on the increase in inflation and is limited to a maximum of 5%.

In December 2003, the Medicare Prescription Drug, Improvement and Modernization Act of 2003 (the "Act") became law in the United States. The Act introduced a prescription drug benefit under Medicare as well as a federal subsidy to sponsors of retiree health care benefit plans that provide a benefit that is at least actuarially equivalent to Medicare Part D under the Act. At December 31, 2005, in the following tables, the measures of the accumulated non-pension postretirement benefit obligation and net periodic non-pension postretirement benefit cost reflect the amount associated with the subsidy.

The following tables provide a reconciliation of the changes in the plans' benefit obligations (projected benefit obligation for pension benefits and accumulated benefit obligation for postretirement benefits) and fair value of the plans' assets during the years ended December 31, 2005 and 2004, and a reconciliation of the funded status to the net amount recognized in the consolidated balance sheets as of December 31 of both years:

	Pension Benefits		Postretirement Benefits	
	2005	2004	2005	2004
Change in Benefit Obligation:				
Benefit Obligation at January 1	\$25,549	\$23,627	\$8,956	\$6,645
Service Cost	1,132	1,011	113	199
Interest Cost	1,479	1,389	386	491
Plan Participants' Contributions	---	---	186	154
Amendments	---	285	(876)	---
Actuarial Loss (Gain)	696	1,074	(943)	1,968
Benefits Paid	(1,430)	(1,837)	(590)	(501)
Benefit Obligation at December 31 ¹	<u>\$27,426</u>	<u>\$25,549</u>	<u>\$7,232</u>	<u>\$8,956</u>
Change in Plan Assets:				
Fair Value of Plan Assets at January 1	\$24,423	\$23,810	\$ ---	\$ ---
Actual Return on Plan Assets	1,013	2,105	---	---
Employer Contributions	1,074	345	405	347
Plan Participants' Contributions	---	---	186	154
Benefits Paid	(1,430)	(1,837)	(591)	(501)
Fair Value of Plan Assets at December 31	<u>\$25,080</u>	<u>\$24,423</u>	<u>\$ ---</u>	<u>\$ ---</u>
Funded Status	\$(2,346)	\$(1,127)	\$(7,232)	\$(8,956)
Unrecognized Transition Obligation	---	---	193	790
Unrecognized Prior Service Benefit	(1,177)	(1,280)	(499)	(244)
Unrecognized Net Loss	9,271	7,913	2,513	3,576
Net Amount Recognized	<u>\$ 5,748</u>	<u>\$ 5,506</u>	<u>\$(5,025)</u>	<u>\$(4,834)</u>

¹ Represents the projected benefit obligation for pension benefits and the accumulated benefit obligations for postretirement benefits.

NAVFAC ENGINEERING & EXPEDITIONARY WARFARE CENTER RESPONSES	DOD IG PROJECT NO. D2011-000CF-027.000 (DRAFT REPORT)	Anticipated Completion Date(s)
Recommendation contracting officer's representative for each task order and distinguish between their duties and the Navy technical representative duties. Agree/Disagree	Corrective Action(s) (BWS) S-18.3.6.6 (Appoint Contracting Officers Representative/Alternate Contracting Officer's Representative) consistent with the FAR. We will review COR and NTR duties and responsibilities and make appropriate adjustments to these assignments. Also see B4.	2 nd QTR FY13
B.1.b We recommend that the Director, Specialty Center Acquisitions, Naval Facilities Engineering Command, in coordination with the Commander, Naval Facilities Engineering Service Center, require Contracting Officers and contracting officer's representatives to sign and date quality assurance surveillance plans before the start of task order performance period. Agree	NAVFAC EXWC Acquisition and EXWC Business Lines will develop, coordinate and implement the appropriate and effective corrective actions. We will ensure task order pre-award check lists are updated to include a check by contract specialist/contracting officer to ensure quality surveillance plans are signed prior to the start of task order performance period.	2 nd QTR FY13
B.1.c We recommend that the Director, Specialty Center Acquisitions, Naval Facilities Engineering Command, in coordination with the Commander, Naval Facilities Engineering Service Center, require Contracting Officer's and Contracting Officer's Representatives to develop quality assurance surveillance plan that provide measurable metrics to evaluate contractor performance and provide set timeframes for frequency of reporting relevant to the subject contract. The quality surveillance plan should identify who has responsibility for surveillance and the level of reporting by the Contracting Officer's Representative to the Contracting Officer. Agree	NAVFAC EXWC Acquisition will provide EXWC COR's with link to the business management system process (B14.3 Performance Assessment) and work with COR's to develop appropriate metrics for inclusion in the plans, and set timeframes for frequency of reporting. We will work with the COR's to develop quality assurance templates for each of the multiple award IDIQ contracts. The QASP will: • Contain metrics to evaluate contractor performance • Include timely feedback of performance improvement • Clearly identify responsibility for surveillance and level of reporting • Document inspection and acceptance • Outline the COR's documentation of surveillance performed and report to the Contracting Officer We will establish a process to periodically review and report compliance with this requirement.	2 nd QTR FY13
B.1.d We recommend that the Director, Specialty Center Acquisitions, Naval Facilities Engineering Command, in coordination with the Commander, Naval Facilities Engineering Service Center, require Contracting Officer's Representatives to document support for inspection and acceptance of deliverables. The approval should clearly identify the type of review performed and basis for the approval. Agree	NAVFAC EXWC Acquisition and EXWC Business Lines will develop, coordinate and implement the appropriate and effective corrective actions.	2 nd QTR FY13
B.1.e We recommend that the Director, Specialty Center Acquisitions, Naval Facilities Engineering Command, in coordination with the Commander, Naval Facilities Engineering Service Center, require Contracting Officer's Representatives Agree	NAVFAC EXWC Acquisition and EXWC Business Lines will coordinate and implement the appropriate and effective corrective actions. COR's will be instructed to report surveillance consistent with recommendations and corrective actions identified in B.1.c above.	2 nd QTR FY13

NAVFAC ENGINEERING & EXPEDITIONARY WARFARE CENTER RESPONSES	DOD IG PROJECT NO. D2011-000CF-027.000 (DRAFT REPORT)		
		Agree/Disagree	Anticipated Completion Date(s)
Recommendation need to document surveillance performed and report progress to the Contracting Officer.	Corrective Action(s)		
B.1.f We recommend that the Director, Specialty Center Acquisitions, Naval Facilities Engineering Command, in coordination with the Commander, Naval Facilities Engineering Service Center, require Contracting Officers to appoint a Navy Technical Representative, if needed, in writing with responsibilities and duties for oversight.	NAVFAC EXWC Acquisition and EXWC Business Lines will develop, coordinate and implement the appropriate and effective corrective actions. NTR's will be appointed in writing with specific duties and responsibilities in accordance with Business Management System (BMS) S-18.3.6.6 (Appoint Contracting Officers Representative/Alternate Contracting Officer's Representative).	Agree	2 nd QTR FY13
B.1.g We recommend that the Director, Specialty Center Acquisitions, Naval Facilities Engineering Command, in coordination with the Commander, Naval Facilities Engineering Service Center, require Contracting Officer's Representatives, Alternate Contracting Officer Representatives, and Navy Technical Representatives obtain required training on surveillance responsibilities.	NAVFAC EXWC Acquisition and EXWC Business Lines will coordinate and implement the appropriate and effective corrective actions. In the interim, we will ensure that the contracting officer's representative, alternate contracting officer's representative, and Navy technical representative complete the required training – NAVFAC is now using the Army's Contracting Officer's Representative Tool (CORT). Utilizing the CORT should assist in ensuring that the contracting officer's representative, alternate contracting officer's representative, and Navy technical representative possess all current and required training and experience before assignment.	Agree	3 rd QTR FY13
B.2 We recommend the Director, Specialty Center Acquisition, Naval Facilities Engineering Command, require a review of the performance of the Contracting Officers and the Contracting Officer's Representatives involved with these task orders. As appropriate, determine whether administrative action is warranted.	NAVFAC EXWC will review the IG recommendation and discern the appropriate actions warranted.	Agree	2 nd QTR FY13
B.3 We recommend the Director, Specialty Center Acquisition, Naval Facilities Engineering Command, require the Contracting Officers to initiate action to recover unsupported other direct costs of \$556,590 unless detailed cost support documentation is provided for: b. \$17,161 on task order 6 under contract N62583-09-D-0065 c. \$3,799 on task order 8 under contract N62583-09-D-0067 d. \$54,707 on task order 3 under contract N62583-09-D-0068 e. \$13,623 on task order 31 under contract N62583-09-D-0064 f. \$17,784 on task order 34 under contract N62583-09-D-0064 g. \$4,634 on task order 9 under contract N62583-09-D-0067 h. \$21,634 on task order 10 under contract N62583-09-D-0067	A NAVFAC EXWC contracting officer and contract specialist will be assigned to review each of the exceptions, and either (i) document the data which supports the allowability, allocability and reasonableness of the billed amounts or (ii) proceed to process for recovery any unsupported billed amounts	Agree	1 st / 2 nd QTR FY13

FMS Award Level Codes

- “Award Level” codes provide additional detail about the basis of the award (e.g. Award Level 7 used on an 01, Competitive Sealed Bid, would indicate that it was a Best Value Bid)
- The city uses 8 Award Level Codes
- [FMS Award Levels](#)

An aerial photograph of the New York City skyline, featuring the Chrysler Building and the Queensboro Bridge. The image is overlaid with a semi-transparent blue filter. A dark blue rounded rectangle with a thin white border is centered in the middle of the image, containing the text "Agency Request Portal" in white.

Agency Request Portal

Agency Request Portal

- The Agency Request Portal (ARP) allows agency staff to flag needed corrections to pending contract, or to modify details in a registered contract. Once flagged, BCA enables agency staff to make the necessary changes in FMS
- Such requests will only be accepted via the ARP (rather than phone or email).
- **Note:** Agency staff are encouraged to double check critical contract and vendor details before submission in order to minimize the need for corrections via the ARP.

Unlocks and Overrides

- Agency staff can use the ARP to make **unlock** or **override** requests.
- **Unlock Requests:**
 - Enables agencies to modify details such as: contract amount, award method, contract type, accounting lines, etc.
 - Can only be submitted for actions that are pending registration with the Comptroller.
- **Override Requests:**
 - Allows agencies to modify details for a registered contract.
 - A corresponding CTR or MAR document must be created in FMS reflecting the requested change before an override request is submitted.
- **Note:** Changes to a vendor details (e.g. name or address) submitted via the ARP may require additional approval by the Comptroller's Vendor Validation Unit.

Potential Environmental Impact / Risk	System instruments to assess and manage the risk/impact	Addressing Identified Gaps
Minor Water Pollution Risks (sediment, debris, wastewater from pipe flushing)	Environment Protection Act (1997): Basis to control pollution and require measures that prevent sediment- or waste-laden discharges to the environment. Health Services Act (1969) and related regulations (Nuisances; Building; Disposal of Offensive Matter): Authority to prevent/abate unsanitary discharges, manage offensive matter, and address blocked or fouled drains. Sanitation Service Authority Act (1974): Mandates proper collection/transport/disposal of wastes through the Sanitation Service Authority (relevant to spoil and debris). Sewerage Regulations (1980): Require submissions/approvals for sewer-related works and compliance with standards, including controls to avoid contamination of public sewers. Planning and Development Act (2019, as amended 2020) and Environmental Impact Assessment Regulations (2021): Where screening triggers an assessment (unlikely for small works), authorities can impose conditions on spoil handling, discharge controls, and reinstatement. Coastal Zone Management Act (1998): Where works are near coastal corridors, permits/conditions may require protection of drains/outfalls to prevent sediment pulses to coastal waters. BWA arrangements: Written SOPs for works (not available for review); Environmental Protection Department may provide technical oversight; Customer Service Department and Compliance Unit handle first-level grievances (with possible escalation to the FTC).	The legal framework for pollution prevention and waste management is well defined but lacks visible translation into field-level guidance for routine maintenance and rehabilitation works. The PAP will ensure BWA SOPs are updated to reflect the national framework and contain specific requirements handling, temporary storage, and disposal of spoil and pipe-flushing water (including preventing discharge to roadside drains) are therefore unclear. The SOPs will include defined contractor actions on preventing discharges to drains, managing wash water, or promptly clearing sediment/debris. Existing customer channels appear oriented to billing/service; no mechanism is evidenced for advance notifications or for receiving/resolving construction-phase complaints. Updating the grievance system to include construction issues specifically will be included as an action in the PAP.

Potential Environmental Impact / Risk	System instruments to assess and manage the risk/impact	Addressing Identified Gaps
Small-Scale Solid Waste Generation (old pipes, packaging, broken meters)	Sanitation Service Authority Act (1974): Provides for collection, transport, and disposal of solid waste through the Sanitation Service Authority. Health Services (Collection and Disposal of Refuse) Regulations, 1975: Set rules for storage, collection, and safe disposal; prohibit indiscriminate dumping. Health Services (Disposal of Offensive Matter) Regulations, 1969: Controls handling and disposal where wastes are offensive; relevant if any waste has such characteristics. Environment Protection Act, 1997: General authority to prevent pollution and require proper waste handling. Planning and Development Act (2019, as amended 2020) & EIA Regulations (2021): Where triggered, authorities may impose conditions on waste segregation, staging, and disposal. BWA arrangements: Documented SOPs for works (not available for review); Environmental Protection Department may provide technical oversight; Customer Service Department and Compliance Unit handle first-level grievances (with possible escalation to the FTC).	Barbados' legal framework provides clear authority and institutional responsibilities for solid waste management, but practical implementation procedures within BWA for small, dispersed construction wastes appear undefined. BWA SOPs were not available for review; requirements for segregation, labeling, temporary staging, collection schedules, and record-keeping (e.g., delivery notes/manifests) are unclear for small quantities from rolling works. No documented approach for manufacturer/vendor take-back or reuse/recycling options. No evidence of contractor orientation on housekeeping, litter control, and secure storage to prevent windblown debris or scattering. Grievance and communication: Existing channels appear oriented to billing/service; no mechanism is evidenced for advance notices and for receiving/resolving construction-phase complaints. Updating the grievance system to include construction issues specifically will be included as an action in the PAP.

THE WORLD BANK

Barbados Water Security and Sector Performance Program (P508674)

Environmental and Social Systems Report – Annex 6

Potential Social Impact / Risk	System instruments to assess and manage the risk/impact	Addressing Identified Gaps
Temporary Access Restrictions (sidewalks, driveways, shop entrances blocked)	Road Traffic Act (Cap. 295): Permitting/authorities for lane/sidewalk closures and detours; requires traffic management plans (TMPs), signage, barriers, flagging, and coordination with police/MoT.	Overall, the legal framework provides a reasonable structure to manage traffic and access risks through permits and safety measures, but operational guidance and field-level monitoring depend on internal BWA practices rather than statutory procedures.
Traffic and Mobility Impacts (lane closures, congestion, pedestrian safety issues)	Planning and Development Act (2019, as amended 2020) + EIA Regulations (2021): Provide screening/assessment and public notice when an IEE/EIA is triggered (uncommon for small linear works).	The PAP will ensure BWA SOPs are updated to reflect the national framework and contain specific requirements on access management (e.g., signage, phasing, temporary walkways).
Business and Livelihood Disruption (loss of customers, disturbance of vendors)	Physical Development Plan (Amendment) 2023: Spatial guidance to flag sensitive receptors (schools, health facilities, high-pedestrian corridors) for heightened mitigation during planning.	Grievance management: At the first level, grievances are handled by BWA's Customer Service Department and Compliance Unit. Escalated complaints can be directed to the FTC, which oversees consumer protection.
Cultural Heritage Risks (disturbance of buried artifacts, cemeteries, churchyards)	BWA Standard Operating Procedures (SOPs) for works guiding field activities (no details available).	However, these mechanisms are primarily oriented to billing/service issues rather than construction-phase disturbances. Updating the grievance system to include construction issues specifically will be included as an action in the PAP.
	BWA's Customer Service Department and Compliance Unit for grievance management.	
	Preservation of Antiquities and Relics Act (2011): The Act prohibits unauthorized excavation, removal, or disturbance of relics and requires any person discovering artifacts during works to immediately halt activities and notify the competent heritage authority. These provisions provide clear legal obligations for chance finds and define government authority over their management.	Overall, the national system provides a robust legal foundation for cultural heritage protection at the national and project-approval level. However, implementation at the operational level depends on BWA's internal procedures and staff awareness, particularly for works not subject to EIA screening.
	Planning and Development Act (2019, as amended 2020) + EIA Regulations (2021): Screening/assessment and public notice when an IEE/EIA is triggered; EIAs may impose heritage safeguards (uncommon for small linear works but applicable near sensitive receptors/heritage zones).	The PAP will ensure that BWA SOPs are updated to reflect the national framework and include documented chance-find procedures (e.g., immediate stop-work, secure area, notify competent heritage authority) or pre-excavation checks for proximity to heritage sites when no IEE/EIA is triggered.
	Physical Development Plan (Amendment) 2023: Spatial guidance and designations for heritage conservation areas to inform siting and mitigation.	
	BWA SOPs for works guiding field activities (no details available).	
	BWA's Customer Service Department and Compliance Unit for grievance management; escalation to the FTC for consumer disputes.	

Potential Social Impact / Risk	System instruments to assess and manage the risk/impact	Addressing Identified Gaps
Occupational Health & Safety Risks (excavation hazards, underground utilities, traffic exposure, machinery, and heat stress)	Safety and Health at Work Act (2005, amended 2022) + subsidiary regs (incl. Workplace (Noise) Regs 2007): Obligations for safe work zones affecting both workers and the public (barriers, demarcation, PPE, method statements, risk assessments). Road Traffic Act (Cap. 295): Traffic Management Plans (TMPs), permits, signage/barriers/flagging for work in/along roads to protect workers and the public.	Overall, the legal framework provides strong coverage of occupational safety and health obligations. However, practical enforcement, supervision, and integration of community-safety aspects rely largely on BWA's internal systems and contractor management rather than external regulatory oversight.
Community Health and Safety Risks	Accidents and Occupational Diseases (Notification) Act (1983): Mandatory reporting of workplace accidents/occupational diseases. National Insurance and Social Security Act (Cap. 47): Employment injury coverage. Sexual Offences Act; Sexual Harassment in Employment (Prevention) Act: Criminal and workplace frameworks relevant to preventing SEA/SH in and around worksites. Discrimination (Persons with Disabilities) Act (2020): Framework for accessibility/equal access considerations. Physical Development Plan (Amendment) 2023: Spatial guidance to flag sensitive receptors (schools, clinics, high-pedestrian corridors) for heightened mitigation. Health Services Act (1969) & Nuisances/Building Regulations: Authority to address nuisances and unsafe/unsanitary conditions from works (e.g., dust, debris, blocked drains). BWA institutional arrangements: Occupational Safety and Health Committee and OSH section within HR for workplace safety oversight and incident reporting; BWA SOPs for carrying out works (not available for review); grievances at first level via Customer Service Department and Compliance Unit, with escalation to FTC (consumer focus).	The PAP will ensure BWA SOPs include construction OSH procedures, work-zone traffic control details, or community protection measures as well as standardized contractor training/orientation requirements and field inspection checklists (e.g., compliance with TMPs, excavation protection, heat-stress logs) applicable to small, rolling works. The PAP will also establish BWA SEA/SH protocols that mandate Codes of Conduct, SEA/SH training, or survivor-sensitive intake/referral procedures for contractor personnel interacting with communities. Existing grievance pathways are oriented to billing/service issues; worker/community safety complaints during construction do not appear to have a dedicated intake and rapid response procedure. Updating the grievance system to include construction issues specifically will be included as an action in the PAP.

Potential Social Impact / Risk	System instruments to assess and manage the risk/impact	Addressing Identified Gaps
Digital Divide / Exclusion of Vulnerable Users (difficulty accessing new digital tools or services)	Constitution (non-discrimination provisions): Provides the overarching legal basis to challenge discriminatory access to public services, supporting equal treatment of users. Discrimination (Persons with Disabilities) Act, 2020: Requires reasonable accommodation and accessible service delivery; provides a complaints pathway for Persons with Disabilities facing barriers to access. Utilities Regulation Act & Fair Trading Commission (FTC): Provides independent consumer-protection oversight, a formal appeals/redress route beyond BWA, and the ability to require corrective actions on unfair service practices. Barbados Water Authority Act & Water Services Regulations: Establish BWA's duties for supply, metering, billing, and service continuity; provide rules on notices and disconnections and authorize customer-service arrangements (i.e., the baseline for assisted/offline channels). BWA Customer Service Department & Compliance Unit: Provide first-level intake and resolution of customer issues (walk-in/phone/email, where available), issue advisories, and escalate unresolved cases; create an institutional point to register and address access barriers. BWA SOPs for works/service delivery (not available for review): Provide internal guidance for operational interactions with customers (e.g., service interruptions/notifications); content not reviewed, so their provisions on accessible/assisted alternatives to digital tools cannot be confirmed.	While Barbados' legal system embeds strong principles of equality and accessibility, these guarantees remain largely normative rather than operational within the utility sector. Existing laws define the right to non-discriminatory and accessible service but do not translate into concrete implementation standards. The ESSA recommends that BWA ensures accessible, assisted, or offline alternatives to digital services (e.g., walk-in/phone/SMS options, plain-language forms, accommodations for Persons with Disabilities). BWA community engagement should also ensure targeted engagement of vulnerable groups including outreach/training/help-desk protocols for older persons, low-literacy users, or areas with limited connectivity.

Potential Social Impact / Risk	System instruments to assess and manage the risk/impact	Addressing Identified Gaps
Concerns from Private Users (changes in regulation, stricter compliance)	Barbados Water Authority (Water Services) Regulations, 1982 — Sets consumer duties (e.g., metering, lawful connections) and procedures for compliance and service discontinuation, giving BWA tools to enforce service-related requirements. Sewerage Regulations, 1980 — Requires permissions/approvals for non-domestic discharges and compliance with system standards. Environment Protection Act, 1997 — Empowers authorities to control pollution and enforce against unlawful discharges; supports inspections, conditions, and sanctions relevant to tighter compliance. Utilities Regulation Act & FTC — Provides independent oversight and an appeal route for user disputes on service/tariff matters; offers a formal avenue to challenge aspects of service changes linked to regulatory shifts. BWA Customer Service Department and Compliance Unit handle first-level grievances with escalation to the FTC; BWA SOPs exist for operations, not available for review, so their provisions on change-management and compliance support cannot be confirmed.	Barbados' legal framework clearly empowers BWA to regulate and enforce service compliance. However, there is little evidence of standardized procedures for communicating regulatory changes, assisting users in meeting new requirements, or applying proportional enforcement (e.g., grace periods, technical assistance, or advisory notices). The PAP will establish a stakeholder engagement plan for the overall Program to address standardized communication or change-management plan/procedure to explain new licensing and monitoring requirements, implementation timelines, or user obligations. BWA existing customer channels appear oriented to billing/service issues; no documented procedures or evidence of capacity to address user concerns related to regulatory changes or compliance requirements. Updating the grievance system to include construction issues specifically will be included as an action in the PAP. The PAP includes actions to upgrade BWA SOPs to include a phased or proportionate enforcement framework (e.g., grace periods, warnings, technical assistance, compliance roadmaps) to reduce burden and uncertainty. No evidence of procedures to identify and accommodate vulnerable users (e.g., tailored guidance or assisted processes).

Potential Social Impact / Risk	System instruments to assess and manage the risk/impact	Addressing Identified Gaps
Disruption of Informal or Unmarked Connections	Barbados Water Authority Act (Cap. 274A) — Establishes BWA's mandate to manage connections and enforce lawful service provision; enables detection and correction of unauthorized connections. Barbados Water Authority (Water Services) Regulations, 1982 — Set obligations for lawful service, metering standards, application/connection procedures, and conditions for service discontinuation/restoration; provide a formal pathway to apply for regular service. Utilities Regulation Act & FTC — Provide an escalation route for consumer disputes related to service status and billing decisions. BWA arrangements — Customer Service Department and Compliance Unit handle first-level complaints and queries; BWA SOPs for works exist, not available for review, so provisions on identifying/handling unrecorded users ahead of works cannot be confirmed.	The PAP will ensure BWA SOPs are updated to reflect the national framework and contain specific requirements for identifying unrecorded or informal connections in advance of works, nor of clear protocols to facilitate their regularization—such as grace periods, amnesty provisions, or assisted application processes. The SOPs will also include a clear, documented protocol for regularization (eligibility, documentation/fee requirements, possible amnesties/grace periods, assisted applications). The ESSA recommends BWA communication and grievance mechanisms be updated to adequately reach or support low-income or undocumented users.

Potential Social Impact / Risk	System instruments to assess and manage the risk/impact	Addressing Identified Gaps
Service disruptions due to underground Utility Strikes	Barbados Water Authority Act & Water Services Regulations (1982) — Establish BWA’s duties over its own assets, lawful connections, service continuity, and repairs; framework for planned shutoffs and notifications. Sewerage Regulations (1980) — Require submissions/approvals for sewer works and compliance with system standards, supporting coordination around sewer assets. Road Traffic Act (Cap. 295) and Highways Act (Cap. 289). Road-opening/occupation permit and Traffic Management Plan (TMP) required. Electric lines/cables (Electric Light & Power Act CAP. 278): crossing/working in proximity is done under the licensee’s standards and consent. Permit condition or bilateral wayleave. National Petroleum Corporation Act, Cap. 280: Crossings near gas lines require NPC’s consent and adherence to its safety requirements. Planning & Development Regulations, 2021 let authorities impose protective conditions (method statements, sequencing) that can include cross-utility coordination and approvals. Health Services Act (1969) & Nuisances/Building Regulations — Enable abatement/control if a strike creates unsanitary conditions (e.g., wastewater spills). BWA arrangements: SOPs for carrying out works (not available for review); Customer Service Department and Compliance Unit for first-level user complaints (with FTC escalation on consumer matters).	The PAP will ensure BWA SOPs are updated to reflect the national framework and contain specific requirements a formal, standardized process for obtaining/recording third-party utility consents/wayleaves, conducting pre-dig coordination, and enforcing utility-protection specifications at crossings. The SOPs will also include mark-out/record standards or safe-dig specifications for proximity to live services, and a utility-strike response protocol. Through boosting BWA’s environmental and social capacity, the PAP will ensure competency-based training for supervisors/plant operators on utility avoidance and strike response, or field inspection checklists/KPIs for compliance.

ANNEX 7 - ALIGNMENT OF PROGRAM SYSTEM BY WORLD BANK PFORR CORE PRINCIPLE

Note: Recommendations can be delivered through the following channels: Modernization Contract; BWA Standard Operating Procedure (BWA-SOP); Program Action Plan (PAP); Coordination with regulators (Reg); and/or Training (Train).

Key Planning Elements	Alignment	Gaps	Recommendations
Core Principle #1: Program environmental and social management systems are designed to (a) promote environmental and social sustainability in the Program design; (b) avoid, minimize, or mitigate adverse impacts; and (c) promote informed decision-making relating to a Program's environmental and social effects.			
Recognized elements of good practice in environmental and social assessment and management (i) Early screening of potential impacts.	Barbados' Planning and Development Act (2019, amended 2020) and EIA Regulations (2021) establish procedures for screening projects to determine whether they require an IEE or a full EIA. The screening is conducted by the EIA Committee under the Planning and Development Department. Criteria include project location (e.g., proximity to conservation areas, coastal zones, heritage sites), project type, and the likelihood of significant impacts. For small-scale utility works like those under the Program, screening typically results in exemptions or IEEs rather than full EIAs, unless works are near sensitive receptors (e.g., natural heritage areas, protected trees, or high groundwater zones). Within BWA, the Water Resources and Environmental Management Unit provides technical input on environmental aspects. In addition, BWA has developed SOPs to guide construction practices and manage temporary impacts (e.g., traffic disruption or access restrictions).	While Barbados' legal framework provides a robust national mechanism for screening projects through the Planning and Development Department and its EIA Committee, this process is designed for large-scale or high-impact developments and is unlikely to apply to most Program activities, which are small-scale and located within existing rights-of-way. Within the BWA, WREMU is in place; however, the assessment did not identify a dedicated tool or procedure used by this Unit to screen environmental and social risks across all interventions. As a result, certain risks—such as temporary access restrictions, occupational health and safety issues, or potential SEA/SH concerns associated with contractor crews—may not be consistently screened, documented, or addressed in a standardized manner across Program sites.	• Introduce a checklist or template for all Program activities to capture potential environmental and social risks (land access, community health and safety, labor influx, SEA/SH, etc.). (Modernization Contract). • Exclude from Program financing any activities likely to generate significant adverse environmental or social impacts inconsistent with World Bank PforR policy exclusions. This includes, but is not limited to: (i) activities causing irreversible impacts on biodiversity and natural habitats (e.g., removal of protected trees, degradation of coastal or marine ecosystems); (ii) disturbance, removal, or loss of cultural heritage resources (e.g., antiquities or relics discovered during excavation); (iii) activities requiring involuntary land acquisition or physical displacement; and (iv) works with risks of large-scale resettlement, conflict, or other sensitive impacts that cannot be adequately mitigated within the scope of Program systems. (PAP).

THE WORLD BANK

Barbados Water Security and Sector Performance Program (P508674)
Environmental and Social Systems Report – Annex 7

Key Planning Elements	Alignment	Gaps	Recommendations
Recognized elements of good practice in environmental and social assessment and management (ii) Consideration of strategic, technical, and site alternatives (including the “no action” alternative).	Barbados’ Planning and Development Act (2019) and EIA Regulations (2021) require that Environmental Impact Assessments include an analysis of project alternatives, covering different technical approaches, site locations, and a “no development” option.	Most Program activities (NRW reduction, metering, and small sewer pilots) are unlikely to trigger a full EIA. Instead, they may only require an IEE, which does not consistently require detailed consideration of alternatives.	• Review/develop BWA internal guidelines requiring consideration of strategic, technical, and site alternatives for all program activities, regardless of EIA status. Modernization Contract. • Ensure that environmental and social factors (e.g., impacts on trees, cultural heritage, traffic disruption, community acceptance) are considered alongside technical and economic criteria when selecting alternatives. (BWA-SOP)(Train). • Institutionalize the practice of documenting a “no action” scenario, particularly to demonstrate avoided impacts and justify interventions. (Modernization Contract)(BWA-SOP). • Strengthen the link between sectoral planning tools (Physical Development Plan, CZMU plans, groundwater protection zones) and BWA decision-making at the project design stage (Reg)(Train).

THE WORLD BANK

Barbados Water Security and Sector Performance Program (P508674)
Environmental and Social Systems Report – Annex 7

Key Planning Elements	Alignment	Gaps	Recommendations
Recognized elements of good practice in environmental and social assessment and management (iii) Explicit assessment of potential induced, cumulative, and transboundary impacts.	Barbados' EIA Regulations (2021) require EIAs to evaluate the likely significant effects of projects, including interactions between different impacts. This would provide a basis to consider cumulative impacts (e.g., combined effects of multiple infrastructure projects on traffic, drainage, or ecosystems). However, the regulations do not explicitly mandate comprehensive cumulative impact assessment (CIA) or strategic environmental assessment. Assessment of induced impacts (e.g., increased urban development facilitated by new sewerage systems) is generally limited and applied only when projects trigger a full EIA.	For small-scale works such as those supported by the Program, induced, cumulative, or transboundary impacts are unlikely, but localized overlaps could occur—several works in the same area-, potentially increasing traffic disruption, construction waste volumes, or short-term pressure on disposal facilities.	• Integrate questions on potential overlaps in timing and location into BWA's program-level screening tool to flag localized cumulative risks. (Modernization Contract)(BWA-SOP). • Require contractors to prepare traffic and waste management plans that account for concurrent works where relevant. (Modernization Contract)(BWA-SOP). • Where sewer pilots are located near coastal areas, ensure basic marine safeguards and monitoring to prevent sedimentation or localized water quality impacts. (Modernization Contract)(Reg)(BWA-SOP).

THE WORLD BANK

Barbados Water Security and Sector Performance Program (P508674)
Environmental and Social Systems Report – Annex 7

Key Planning Elements	Alignment	Gaps	Recommendations
Recognized elements of good practice in environmental and social assessment and management (iv) Identification of measures to mitigate adverse environmental and social risks and impacts that cannot be otherwise avoided or minimized.	Barbados' legal framework provides mechanisms to identify and require mitigation measures. EIA Regulations (2021, S.I. 88) require that an EIA report include: "A description of measures proposed to avoid, reduce, or remedy significant adverse effects." The Planning and Development Act (2019, as amended 2020) empowers the Planning and Development Board to attach conditions of approval to development permissions, including measures designed to avoid, minimize, or mitigate adverse environmental and social impacts. Beyond the planning and EIA framework, several sectoral laws also impose mitigation obligations that are directly relevant to Program activities. For example.: the Environment Protection Act (1997) requires pollution control and safe handling of hazardous materials, applicable to construction waste, oils, or asbestos from old pipes; the Coastal Zone Management Act (1998) empowers the CZMU to mandate erosion control and sediment barriers where works occur near coastal areas; the Safety and Health at Work Act (2005, amended 2022) obliges contractors to implement occupational health and safety mitigation (e.g., dust, noise, PPE, traffic safety) across all works; the Health Services Act (1969) and its regulations require mitigation to prevent nuisances and unsanitary conditions during excavation and sewer works; the Road Traffic Act (Cap. 295) enforces traffic management measures when trenching affects public roads.	While Barbados' legal framework provides mechanisms for imposing mitigation measures, these are generally activated when projects undergo an IEE or EIA. For small-scale interventions—such as those typical under the Program—systematic mitigation is not automatically required unless conditions are imposed by authorities. Within the BWA, the Water Resources and Environmental Management Unit (WREMU) is in place; however, the assessment did not identify a dedicated tool or procedure used by this Unit to screen environmental and social risks across all interventions. As a result, certain risks may not be consistently screened, documented, or addressed in a standardized manner across Program sites.	• Develop standardized Environmental Codes of Practice (ECoPs) and SOPs for small-scale water and sanitation works (e.g., trenching, pipe replacement, leak repair, sewer pilots) covering dust suppression, noise/vibration management, traffic safety, hazardous materials handling, waste disposal, and community health and safety. (Modernization Contract). • Integrate ECoPs/SOPs into bidding documents and contracts for all contractors engaged in Program works, making compliance mandatory and enforceable. (Modernization Contract). • Enhance monitoring and supervision capacity: Designate environmental and social focal points within BWA to monitor compliance with mitigation measures. (PAP)(Modernization Contract)(Train). • Provide capacity building and training: Implement training programs for BWA engineers, site supervisors, and contractors on environmental and social risk mitigation, community health and safety, OSH, and SEA/SH protocols. (Modernization Contract).

THE WORLD BANK

Barbados Water Security and Sector Performance Program (P508674)
Environmental and Social Systems Report – Annex 7

Key Planning Elements	Alignment	Gaps	Recommendations
Recognized elements of good practice in environmental and social assessment and management (v) Clear articulation of institutional responsibilities and resources to support implementation of plans.	Barbados has a clear regulatory framework for environmental and social assessment and management. The PDD administers the Planning and Development Act (2019) and oversees the screening of projects to determine whether an IEE or EIA is required. The Planning and Development Board (PDB) has legal authority to issue or refuse development permissions and to attach conditions requiring environmental and social mitigation. The EIA Committee, a technical advisory group composed of line agencies (such as the Environmental Protection Department, the Coastal Zone Management Unit, and the Ministry of Health), reviews environmental and social assessments and advises the Director of Planning and the Board on the adequacy of proposed mitigation measures. Together, these institutions provide the core mechanism to integrate environmental and social considerations into project approvals.	BWA has an Environmental Unit, but there is no documented, program-wide definition of environmental and social roles, decision rights, or resourcing (staff/budget/tools) to implement plans. Available information does not evidence standard ECoPs/environmental SOPs for typical small-scale WSS works, and existing social SOPs (e.g., GRM/referral) are not shown to be integrated into a single implementation framework.	• Develop clear program-level procedures (e.g., screening checklists, ECoPs/SOPs) that assign environmental and social responsibilities for BWA staff, contractors, and regulators. (Modernization Contract). • Provide capacity building and training: Implement training programs for BWA engineers, site supervisors, and contractors on environmental and social risk identification, community health and safety, OSH, and SEA/SH protocols. (Modernization Contract). • Enhance monitoring and supervision capacity: Designate environmental and social focal points within BWA to monitor compliance with mitigation measures. (Modernization Contract)(PAP).

THE WORLD BANK

Barbados Water Security and Sector Performance Program (P508674)
Environmental and Social Systems Report – Annex 7

Key Planning Elements	Alignment	Gaps	Recommendations
Recognized elements of good practice in environmental and social assessment and management (vi) Responsiveness and accountability through stakeholder consultation, timely dissemination of the PforR information, and responsive GRMs.	Barbados has a legal basis for stakeholder consultation and information disclosure primarily through the Planning and Development Act (2019) and the EIA Regulations (2021, S.I. 88), which require public notice of proposed projects, a minimum 21-day period for written submissions, and the possibility of public hearings when sufficient interest is identified. At the programmatic level, the Barbados Water Authority (BWA) engages with customers through its service channels, customer service offices and public advisories. However, these mechanisms are not specifically designed to address environmental and social issues arising from works, such as construction-related disturbances or localized impacts. Grievance handling exists in two forms: (i) formal consumer complaint processes managed by the FTC and BWA's customer service, and (ii) statutory grievance pathways available during planning approvals and EIAs. Neither is tailored to construction-phase environmental and social risks.	Public hearings are triggered only when an IEE or EIA is required and proceeds only if the authorities determine that there is "sufficient public interest." Since most small-scale works under the Program are unlikely to require a full EIA, systematic consultation and disclosure mechanisms may not be applied. Absence of a program-level GRM tailored to environmental and social risks during implementation. The BWA maintains regular channels for customer interaction on billing and service interruptions, but it does not operate a structured mechanism for capturing and resolving grievances related to environmental, health, safety, or community impacts that may arise during works.	- Standardize consultation and disclosure for all works: Define a minimum package for every site (advance notice to neighbors, on-site signage with scope/timeline/contacts, briefings for moderate/high-impact sites, and end-of-works notice, where to get more information), using simple templates and accessible language. (Modernization Contract)(BWA-SOP). - Establish a program-level GRM: Provide multiple intake channels (toll-free hotline, SMS/WhatsApp, email/web form, on-site boxes), assign unique case IDs, track receipt–investigation–outcome–closure, ensure confidentiality, accept anonymous complaints, enable access for vulnerable groups and be able to receive SEA/SH related grievances. (PAP)(Modernization Contract). - Embed consultation and GRM requirements in procurement and contracts. (Modernization Contract)(BWA-SOP). - Set service standards and escalation protocols (define the timeline, responsibility, and escalation chain for handling grievances). (PAP)(BWA-SOP) - Resource and train for implementation: designate community liaison focal points, allocate budget for outreach and GRM operation, and deliver training to BWA staff and contractors on consultation practices, GRM intake/handling, community health and safety, and SEA/SH-sensitive procedures. (PAP)(Modernization Contract).

Load criteria for all floor live loads, roof live load, roof snow load, wind load, earthquake design data, and special loads must be shown on drawings. Live load reduction of the uniformly distributed floor live loads, if used in design, must be indicated.

10. Required construction procedures
 11. Special shoring or bracing requirements
 12. Seismic design criteria, such as seismic use group, special response coefficients SD_s and SD_1 , site class, basic seismic-force-resisting system, design base shear, and analytical procedure must be indicated, and any additional information required by NYC Building Code.
 13. Soil Boring Plan and soils analysis, provided by DDC and incorporated into the drawing set.
 14. Boring logs, provided by DDC and incorporated into the drawing set.
 15. Blast-resistant requirements, if applicable.
 16. Indicate the codes and standards used to develop the project
- iii. Schedules
Schedules for foundations, columns, walls, beams, slabs, and decks, as applicable.
- iv. Structural Details
All typical details must be shown on the drawings.
1. Sizes, locations, and details of major structural elements and their connections, including equipment supports and site structures, base plates and anchor bolts, camber, shear stud types, and lengths.
 2. Location and details of all construction, control, and expansion joints.
 3. Substructure waterproofing details – show extent of waterproofing and water-stop systems.
 4. Details for anchorage of building system equipment and non-structural building elements (may be shown on mechanical, electrical, or architectural drawings, as applicable).

10. HVAC and Fire Protection Documents

The HVAC/Fire Protection documents shall consist of the following information:

- a. Calculations and Energy Analysis
- i. Heating and cooling load calculations.
 - ii. Systems pressure static analysis at peak and minimum block loads for occupied and unoccupied conditions.
 - iii. Building pressurization analysis for peak and minimum block loads for occupied and unoccupied conditions.
 - iv. Acoustical calculations for peak and minimum block loads for occupied conditions.
 - v. Sound level calculations.
 - vi. Flow and head calculations for pumping systems for peak and minimum block loads for occupied conditions.
 - vii. Final selection of equipment and cut sheets of selected equipment.
 - viii. Psychrometric calculations of the selected HVAC systems at full and partial loads (partial loads at 25%, 50%, and unoccupied periods).
 - ix. Energy consumption calculations and analysis.
 - x. Fuel consumption estimates.
 - xi. Sizing of fuel storage and distribution system.
 - xii. Sizing of vibration isolators for mechanical equipment.

- xiii. Water consumption calculations and analysis of make-up water for HVAC systems.
- xiv. For any fire modeling generated results, submit a copy of the input data and all pertinent program material and assumptions required to understand the output and the analysis. A narrative of the input and results must be part of the calculations.
- xv. Fire protection water supply calculations, including water supply flow testing data.
- xvi. Fire pump calculations, where applicable.
- xvii. Water reserve calculations for sprinkler system.
- xviii. Smoke control calculations, where applicable.
- xix. Stairway pressurization calculations, where applicable.
- xx. Fire modeling.

b. Narrative

A written narrative describing the final mechanical system and equipment selection including:

- i. Indoor and outdoor design conditions for all spaces under occupied, 24-hour, and unoccupied conditions.
- ii. Ventilation rates, dehumidification, and pressurization criteria for all spaces under occupied, 24-hour, and unoccupied conditions.
- iii. Equipment capacities, weights, sizes, sound power and power requirements.
- iv. Psychrometrics of HVAC systems.
- v. Catalog cuts of all equipment to be used on the project.
- vi. Description of the air-side and water-side systems and the associated components, including operating characteristics, ranges, and capacities, and spaces served and special features.
- vii. Description of the control strategy, specific operating and sequence of operations for all spaces under occupied, 24-hour, and unoccupied conditions, and required interlocking for each system.
- viii. Analysis report related to acoustic design compliance.
- ix. Noise control methods for projects that incorporate new or replacement of exterior mechanical/electrical equipment, as required to comply with Local Law 113 of 2005 (Noise Control Code).
- x. Fuel and utility requirements.
- xi. Description of any deviation from the HVAC and fire protection systems as approved in the Design Development Phase.

c. Specifications

Completely edited version of each specification section to be used on the project.

d. Drawings

The drawings submitted shall consist of the following:

- i. Demolition drawings, as applicable. Indicate all existing systems to be demolished.
- ii. HVAC Floor Plan(s) showing all components of all systems, including room-by-room duct distribution, diffuser, and register locations. Fully describe existing systems and/or integration of existing or new system:
 - 1. Double line piping and ductwork layout criteria.
 - 2. Show interior zone terminal air units.
 - 3. Show perimeter zone terminal units.

4. Show locations of automatic control sensors (e.g. temperature, relative humidity, CO₂, etc.).
5. Refrigerant pipe routing to and from interconnected pieces of equipment shall be sized and shown on the HVAC plans. Indicate all filter dryers, solenoid valves, strainers, pressure relief valves, flexible connections, receivers, and sight glasses.
- iii. Roof Plan showing all roof-mounted equipment and access to roof.
- iv. Mechanical details:
 1. Quarter-inch scale drawings of mechanical equipment room(s) showing all mechanical equipment, ductwork, and piping, including equipment access and service requirements in plan, elevations, and sections.
 2. The Consultant shall clearly indicate the manufacturer's required access space or tube-pull space for all mechanical equipment criteria.
 3. Provide installation details of each equipment type used on the project.
 4. All valves must be shown. Indicate locations where temperature, pressure, flow, contaminant/ combustion gases, or vibration gauges are required, and if remote sensing is required.
 5. Mechanical room piping and ductwork layout must be double line. All ductwork and piping 3" diameter and larger located in mechanical equipment rooms are to be indicated to scale.
 6. Sections

If the mechanical equipment room contains multiple pieces of equipment, provide at least two sections to show the elevations of all equipment, piping, ductwork, and structural supports. Scale for sections to be 1/4" = 1'-0" or larger. Ductwork to be shown in double line drawing.
 7. Mechanical Equipment Room
 - a. Additional sections

Where mechanical equipment units, ductwork and piping are located in tight spaces, sufficient sections shall be developed to show elevations of all equipment, piping, ductwork, and structural support. All sections to be 1/4" = 1'-0" or larger.
 - b. Composite drawings

For equipment rooms, congested corridors, and all areas involving the work of more than one trade, provide composite sections showing all new and existing equipment and conditions.
 8. All dampers – both fire dampers and volume control dampers – must be shown. Ductwork ahead of the distribution terminal must be indicated in true size (double line).
- v. Single line schematic flow and riser diagram(s):
 1. Water flow quantities and balancing devices for all heating/cooling equipment. Provide complete schematic flow diagrams for all systems, both new and existing to be modified, showing all necessary equipment and valves. Systems include steam, chilled water, condenser water, hot water, fire protection, and fuel oil.
 2. Airflow quantities and balancing devices for all heating/cooling equipment, air-handling, air-conditioning, and exhaust systems. The Consultant shall indicate all automatic controls, dampers, temperature sensors, control valves, return/relief air routing, and maximum and minimum air quantities for supply, return, and relief air. Provide control system legend.
 3. Show location of all flow/energy measuring devices for water and air systems for all cooling, heating, and terminal equipment, and their interface with the BMS.

4. Refrigerant piping schematic flow diagrams.
5. Flow and riser diagrams shall be provided for new systems and existing systems being modified.
- vi. Automatic control diagram(s):
 1. Control flow diagrams showing all sensors, valves, and controllers (analog and digital inputs for controllers, front end equipment, and system architecture).
 2. Diagrams to show control signal interfaces, complete with sequence of operation of all heating, ventilating, and cooling systems during occupied, 24-hour operations, and unoccupied conditions.
 3. Control diagrams shall be provided for new BMS systems and for new and existing systems when inter-phasing with new BMS system.
- vii. Schedules:
 1. Provide schedules of equipment that include chillers, boilers, pumps, air-handling units, terminal units, cooling towers, and all equipment required for 24-hour operations.
 2. The Consultant shall submit equipment schedules with basic equipment design parameters completed so as to indicate type, capacity, and zoning of systems.
 3. Air terminal devices
 4. Provide schedules for fire protection and other special systems.
- viii. Air balance relationships between spaces
- ix. Full set of fire protection construction drawings indicating branch sprinkler piping and head locations.
- x. Fire protection details (all typical details must be shown on the drawings).
 1. Life safety stairway pressurization fans
 2. Fire pump configuration
 3. Anchorage of underground fire protection water supply lines
 4. Standpipe riser
 5. Installations of waterflow switches and tamper switches
 6. Sprinkler floor control valves, sectional valves and test assembly
 7. Non-water-based fire extinguishing systems (e.g. wet chemical)
 8. Special fire protection systems (e.g. kitchens, computer rooms, etc.)
- xi. Riser diagrams for sprinkler system
- xii. Coordinate with electrical power requirement for HVAC equipment, requirements and location of duct smoke detectors, fire and smoke dampers, fire alarm, and fan shut-down.
- xiii. Identifications

All air-handling units shall clearly identify all coil sections, filters, access locations, and the mixing plenum. The location and weight of all equipment shall be indicated. Indicate openings, penetrations, and support.
- xiv. Energy compliance drawings, COMcheck.

11. Electrical Documents

The Electrical documents shall consist of the following information:

- a. Calculations
 - i. Load calculations

Site Visit Instructions

Check-in will begin at 10:00 AM (EST) on 01 April 2026 in the lobby of NUWCDIVNPT Building 80, Newport, RI.

The following rules apply for the site visit:

- This will be an Unclassified site visit.
- The site visit will be scripted, no questions will be allowed during the tour.
- Follow-up questions can be submitted via email to amy.k.prisco.civ@us.navy.mil and Michael.N.Ouellette.civ@us.navy.mil
- The use of any type of camera during the site visit is strictly prohibited.
- All interested attendees must pre-register by email to amy.k.prisco.civ@us.navy.mil and Michael.N.Ouellette.civ@us.navy.mil
- In Addition to pre-registration, all participants MUST have an approved Visit Request.
- Instructions for submitting a visit request can be found at the following link:
<http://www.navsea.navy.mil/Home/Warfare-Centers/NUWC-Newport/Contact-Us/Mandatory-Visit-Request/>
- Access to NUWC Division Newport WILL NOT be granted under any circumstances without a valid visit authorization request on file. Please list Michael Ouellette, Code 0223, as the Government POC when submitting the visit request.
- Visitor Control - NUWC Newport Building 80 Lobby outside of NUWC Gate 23 Is open Monday- Friday from 7 a.m. to 3:30 p.m. (except holidays)

NUWC NEWPORT DIVISION VISITOR REQUEST INFORMATION

- A site visit request is **MANDATORY** for all visitors to NUWC Division Newport; government and civilian, regardless of the duration or classification of the visit. Access to NUWC Division Newport will not be granted under any circumstances without a valid visit authorization request (VAR) on file.
- If you can submit your VAR via JPAS, you do not need to send a VAR on company letterhead.
- Due to the number of visit requests received, please allow 7 business days for processing time, whether received by JPAS or on Company Letterhead via FAX or EMAIL.
- Visitors who arrive prior to the 7 working day processing window may not be guaranteed access.
- Please note, all individuals not in possession of a common access card (CAC) or Teslin Card (Retired Military/Dependent ID), will require a DBIDS card for access.
- No unescorted access will be granted without a valid DBIDS card or ID mentioned above.

NOTE 22: LEASE COMMITMENTS (In Thousands)

At December 31, 2005, Arrow was obligated under a number of noncancelable operating leases for buildings and equipment. Certain of these leases provide for escalation clauses and contain renewal options calling for increased rentals if the lease is renewed.

Future minimum lease payments on operating leases at December 31, 2005 were as follows:

	Operating Leases
2006	\$ 267
2007	269
2008	266
2009	218
2010	219
Later Years	<u>1,524</u>
Total Minimum Lease Payments	<u>\$2,763</u>

Arrow leases two of its branch offices, at market rates, from Stewart's Shops Corp. Gary Dake, president of Stewart's Shops Corp., serves on both the boards of Arrow and Saratoga National Bank and Trust Company.

**NOTE 23: FINANCIAL INSTRUMENTS WITH OFF-BALANCE SHEET RISK AND CONTINGENT LIABILITIES
(In Thousands)**

Arrow is party to financial instruments with off-balance sheet risk in the normal course of business to meet the financing needs of its customers. These financial instruments include commitments to extend credit and standby letters of credit. Commitments to extend credit include home equity lines of credit, commitments for residential and commercial construction loans and other personal and commercial lines of credit. Those instruments involve, to varying degrees, elements of credit and interest rate risk in excess of the amount recognized in the consolidated balance sheets. The contract or notional amounts of those instruments reflect the extent of the involvement Arrow has in particular classes of financial instruments.

Arrow's exposure to credit loss in the event of nonperformance by the other party to the financial instrument for commitments to extend credit and standby letters of credit is represented by the contractual notional amount of those instruments. Arrow uses the same credit policies in making commitments and conditional obligations as it does for on-balance sheet instruments.

Commitments to extend credit were \$142,299 and \$138,338 at December 31, 2005 and 2004, respectively. These commitments are agreements to lend to a customer as long as there is no violation of any condition established in the contract. Commitments generally have fixed expiration dates or other termination clauses and may require payment of a fee. Since many of the commitments are expected to expire without being drawn upon, the total commitment amounts do not necessarily represent future cash requirements. Arrow evaluates each customer's creditworthiness on a case-by-case basis. Home equity lines of credit are secured by residential real estate. Construction lines of credit are secured by underlying real estate. For other lines of credit, the amount of collateral obtained, if deemed necessary by Arrow upon extension of credit, is based on management's credit evaluation of the counterparty. Collateral held varies, but may include accounts receivable, inventory, property, plant and equipment, and income-producing commercial properties. Most of the commitments are variable rate instruments.

In November 2002, the FASB issued FASB Interpretation No. 45 ("FIN No. 45"), "Guarantor's Accounting and Disclosure Requirements for Guarantees, Including Indirect Guarantees of Indebtedness of Others; an Interpretation of FASB Statements No. 5, 57, and 107 and rescission of FASB Interpretation No. 34." FIN No. 45 requires certain new disclosures and potential liability-recognition for the fair value at issuance of guarantees that fall within its scope. Under FIN No. 45, Arrow does not issue any guarantees that would require liability-recognition or disclosure, other than its standby letters of credit.

NOTE 23: FINANCIAL INSTRUMENTS WITH OFF-BALANCE SHEET RISK AND CONTINGENT LIABILITIES
(Continued)

Arrow has issued conditional commitments in the form of standby letters of credit to guarantee payment on behalf of a customer and guarantee the performance of a customer to a third party. Standby letters of credit generally arise in connection with lending relationships. The credit risk involved in issuing these instruments is essentially the same as that involved in extending loans to customers. Contingent obligations under standby letters of credit totaled \$2,984 and \$2,630 at December 31, 2005 and 2004, respectively, and represent the maximum potential future payments Arrow could be required to make. Typically, these instruments have terms of 12 months or less and expire unused; therefore, the total amounts do not necessarily represent future cash requirements. Each customer is evaluated individually for creditworthiness under the same underwriting standards used for commitments to extend credit and on-balance sheet instruments. Company policies governing loan collateral apply to standby letters of credit at the time of credit extension. Loan-to-value ratios will generally range from 50% for movable assets, such as inventory, to 100% for liquid assets, such as bank CD's. Fees for standby letters of credit range from 1% to 3% of the notional amount. Fees are collected upfront and amortized over the life of the commitment. The carrying amount and fair value of Arrow's standby letters of credit at December 31, 2005 and 2004 were insignificant. The fair value of standby letters of credit is based on the fees currently charged for similar agreements or the cost to terminate the arrangement with the counterparties.

Under SFAS No. 107 the fair value of commitments to extend credit is determined by estimating the fees to enter into similar agreements, taking into account the remaining terms and present creditworthiness of the counterparties, and for fixed rate loan commitments, the difference between the current and committed interest rates. Arrow provides several types of commercial lines of credit and standby letters of credit to its commercial customers. The pricing of these services is not isolated as Arrow considers the customer's complete deposit and borrowing relationship in pricing individual products and services. The commitments to extend credit also include commitments under home equity lines of credit, for which Arrow charges no fee. The carrying value and fair value of commitments to extend credit are not material and Arrow does not expect to incur any material loss as a result of these commitments.

In the normal course of business, Arrow and its subsidiary banks become involved in a variety of routine legal. At present, there are no legal proceedings pending or threatened, which in the opinion of management and counsel, would result in a material loss to Arrow.

NOTE 24: FAIR VALUE OF FINANCIAL INSTRUMENTS (In Thousands)

The following table presents a summary at December 31 of the carrying amount and fair value of Arrow's financial instruments not carried at fair value or an amount approximating fair value:

	<u>2005</u>		<u>2004</u>	
	<u>Carrying Amount</u>	<u>Fair Value</u>	<u>Carrying Amount</u>	<u>Fair Value</u>
Securities Held-to-Maturity (Note 3)	\$118,123	\$118,495	\$108,117	\$111,058
Net Loans (Note 4)	984,304	971,835	863,265	869,252
Time Deposits (Note 9)	375,798	373,171	256,793	256,404
FHLB Advances (Note 11)	157,000	156,851	150,000	152,675
